

BASS AMP ROOM

Softube Launches Bass Amp Room and Amp Room Bundle

Linköping, Sweden. May 4th 2009 – Softube is shipping the Bass Amp Room plug-in for native VST, AU, RTAS. Bass Amp Room is available today at the Softube web shop (\$199, excl. VAT).

Softube also presents Amp Room Bundle, containing native versions of Bass Amp Room, Metal Amp Room, and Vintage Amp Room at a reduced price of \$549 (web price, excl. VAT). That's a massive saving of \$178 (24%) compared to buying each title individually. Bundle upgrades from previously purchased Amp Rooms are also available.

Bass Amp Room was designed to handle all your bass amp needs, from dirty rock to modern clean, keeping two equally important goals in mind. The first was to give the user the best possible sound quality. The latter was to create an intuitive plug-in which allows for a really fast work flow. Time is money, but cutting down on time shouldn't mean you have to accept poor results.

Bass Amp Room consists of a model of a classic bass amplifier, three distinctive speaker cabinets with click-and-drag mics, and a blendable DI section with tone controls and a limiter. That's it. And it's all you need to create a unique signature sound - the strength lies in the ease of use of the individual blocks and the huge range of sounds these can produce when combined.

In short, Bass Amp Room is all about getting a sound you know you can trust, and getting it quickly, from a plug-in you don't need a degree in computer science to handle.

With a passion for music and mathematics, Softube was founded in 2003 as a developer of digital signal processing algorithms for the audio industry. Several current products by renowned manufacturers are based on Softube technology. Vintage Amp Room was the first product under the Softube brand name.

Softube's core technology is the simulation of analog circuits through physical modeling, an area in which the company holds several patents. Collaborating closely with Linköping Institute of Technology, Softube has completed more than a dozen research projects, with topics ranging from spring reverb simulations and resonance modeled room simulations, to novel power amp designs and next-generation compilers.
