## **Softube Embarks on Educational Collaboration with SAE in Germany**

**Linköping, Sweden. August 21<sup>st</sup> 2009** – Softube and SAE Institute join forces to bring the full range of Softube products to all workstations at SAE campuses across Germany. All students will be able to use Softube's line of stellar quality plug-ins, including Metal Amp Room and FET Compressor, as part of their education.

Chris Müller, Assistant CEO at SAE Institute Germany says: "The Softube plugins add great value to our education and provide our students with more professional tools to work creatively at the highest level"

Softube CEO Oscar Öberg comments: "This is a fantastic opportunity for us to put our software in the hands of the future of the music industry. We are very excited to see what will happen when the creativity, skill and inventiveness of SAE students is combined with Softube products."

**About SAE Institute:** The SAE Institute was founded in 1976. Today SAE Institute is the world's largest media education network for audio engineering, digital film & animation, web design & development, and game design, with 50 facilities spanning 21 countries on five continents.

**About Softube:** With a passion for music and mathematics, Softube was founded in 2003 as a developer of digital signal processing algorithms for the audio industry. In addition to the Softube range of plug-ins, several current products by renowned manufacturers are based on Softube technology. Softube's core technology is the simulation of analog circuits through physical modeling, an area in which the company holds several patents.
